

SUMMER CAMP WEEKLY REPORT

3rd- 6th June, 2025

ATTENDANCE

First day attendance:

TLF: 131

Summer Camp : 353

Second day attendance:

TLF : 117

Summer Camp : 280

Third day attendance:

TLF: 110

Summer Camp:

Fourth Day attendance:

TLF:

Summer Camp:

MORNING SESSION

MORNING SESSION – 03 June

The first morning assembly served as an informal introduction, allowing all the coordinators to warmly welcome the students to the summer camp. It was designed to break the ice and build comfort among participants. Coordinators introduced themselves, shared highlights of the upcoming activities, and interacted with students to understand their expectations. The session created a friendly and inclusive atmosphere, setting the tone for a fun and engaging week ahead.

MORNING SESSION – 04 June

The morning began with a revitalising **yoga session**, aimed at promoting mindfulness, flexibility, and physical well-being. Led by an instructor, the session included breathing exercises, basic stretches, and guided postures suitable for all age groups. Students participated actively, and the calming start helped them focus and energise for the rest of the day's activities. The yoga session encouraged healthy habits and introduced students to the importance of mental and physical balance.

MORNING SESSION – 05 June

To celebrate **World Environment Day**, a special quiz was organised during the morning assembly. The quiz featured 10 quick one-liner questions designed to raise environmental awareness in a fun, engaging way. Students who answered correctly were awarded a potted plant and a ₹100 Dairy Milk chocolate, combining a message of sustainability with a delightful treat. The quiz created a vibrant, educational atmosphere and encouraged students to think more deeply about environmental responsibility.

MORNING SESSION – 06 June

The final morning assembly of the week was dedicated to a **student feedback session**. Coordinators facilitated an open conversation, encouraging students to share what they enjoyed, what could be improved, and their overall experience of the summer camp so far. The session was constructive, with students expressing excitement about the activities and offering thoughtful suggestions. This reflective assembly allowed the camp

team to acknowledge student voices and prepare for an even better second week.

LUNCH SERVED

03/06/25 – Tuesday

Lunch included Poori and Aloo Subji with TP Juice. The meal was well-received overall, though a few found the subji slightly spicy.

04/06/25 – Wednesday

Pav Bhaji and TP Juice were served. Participants enjoyed the flavours, with some requesting extra pav for a more filling meal.

05/06/25 – Thursday

Plain Parantha and Aloo Subji were served with TP Juice. While the meal was comforting, a few suggested adding curd or pickle for variety.

06/06/25 – Friday

The South Indian combo of Sambhar, Idli, and Vada was served with TP Juice. Sambhar and Vada were appreciated, though Idlis were slightly dry for some.

SUBJECT DETAILS

1. ASTROGEO (Summer Camp)

1. What Was Taught in the Subject

During Week 1, all groups were introduced to core topics in **space science**, with an emphasis on building factual and conceptual understanding. Key concepts covered included:

- Black holes, white holes, supernovas, and other galactic phenomena
- Structure and layers of the Sun

- Celestial bodies and cosmic formations

This content was delivered through short lectures followed by interactive discussions to aid retention and engagement.

2. Activities Done

Each group participated in **two main activities** designed to reinforce the day's content:

- **Flip Card Game:** Helped students revise space-related vocabulary and facts in a fun, engaging way
- **Quizzes:** Tested immediate recall and created a healthy, competitive environment

3. Topics Covered in Activities

The interactive tasks allowed students to explore:

- Features of the Moon
- Structure of the Solar System
- Earth's physical and geographical features

4. Group-Wise Observations and Feedback

- **Group G2 (Red)** – Taught on 3rd
Students initially lost focus during longer lectures but became more attentive when activities were introduced. On Day 1, the session was restructured to begin with activities, which significantly improved engagement.
Solution Applied: Shifted to a more **activity-first** approach.

- **Group G3 (Light Green)** – Taught on 4th
Students in this group remained engaged and participative throughout both lectures and activities.

Observation: No major issues; the current format worked effectively.

- **Group G4 (Light Blue)** – Taught on 5th
Students showed lower interest during lecture segments but became enthusiastic during the interactive parts.
Suggested Solution: Make lectures more **visual and concise**, and begin activities earlier in the session.
- **Group G5 (Black)** - Taught on Day 6th

Students in this group remained engaged and showed interest during lecture segments. When covering material, students got bored, so we had to switch to activities.

5. Issues Faced

- Students often **lost focus** during long theoretical explanations.
- Sessions that lacked immediate hands-on activities saw **lower energy levels**.

6. Suggestions or Solutions

- Minimise extended factual teaching; **blend lectures with visual aids and demonstrations**.
- Use **activity-based learning** as the primary method for concept reinforcement.
- Maintain high engagement through **interactive formats** such as games, models, or storytelling.

2. PRODUCT DEVELOPMENT AND SELLING (Summer Camp)

1. What Was Taught in the Subject

Throughout the week, students were introduced to foundational concepts in **product development**, **design thinking**, and **pitching strategies**. Core elements included:

- Basics of product development processes
- Real-life problem identification and analysis
- Team-based ideation and innovation
- Structuring and presenting pitches using startup-inspired formats

These topics were explored through worksheets, guided group discussions, and structured exercises that encouraged critical thinking and creativity.

2. Activities Done

Students actively participated in practical, collaborative tasks to reinforce the learning:

- **Problem-Solving Workshops:** Teams worked to identify challenges and ideate solutions
- **Shark Tank Challenge:** Simulated startup environment where students pitched product ideas to peers, encouraging confidence and entrepreneurial thinking

3. Topics Covered in Activities

The group activities allowed students to practice:

- Real-world problem identification
- Innovation and brainstorming

- Team-based product concept development
- Effective pitching and presentation skills

4. Group-Wise Observations and Feedback

- **Multiple Groups** – Taught on 3rd
Focus: Introduction to product development basics and real-life problem scenarios.
Feedback: Students were enthusiastic and showed quick understanding of the concepts.
Issues: None reported.
- **Multiple Groups** – Taught on 4th
Focus: Application of design thinking in the **Shark Tank Challenge**.
Feedback: Presentations were confident, and teamwork was excellent.
Issues: None reported.
- **Group G5 (White Group)** – Taught on 5th
Focus: Continued development using worksheets and group-based problem-solving.
Feedback: Students contributed thoughtfully and collaborated well.
Issues: None reported.

5. Issues Faced

No significant issues were observed across any of the sessions. Participation levels were consistently high, and all sessions were conducted smoothly with effective time use.

6. Suggestions or Solutions

None at this time. The current structure — a blend of concept introduction, hands-on teamwork, and pitch-based challenges — is proving effective and well-received by students.

3. CRITICAL REASONING (*Summer Camp*)

1. What Was Taught in the Subject

Throughout the week, students were introduced to the fundamentals of **critical reasoning**. Key concepts covered included:

- Introduction to critical reasoning and logical thinking
- The importance of general knowledge in building reasoning skills
- Reinforcement of classroom discipline (e.g., raising hands, taking turns)

The sessions emphasised **structured thought, observational learning, and disciplined engagement**.

2. Activities Done

Every session was designed to be interactive and engaging through visually stimulating and team-based exercises:

- **Guess Who Quiz** – Students received 3 clues to identify well-known Indian personalities
- **World Map Challenge** – Students matched countries based on fun facts and clues
- **Indian States Round** – Students identified states from cultural and factual hints (no map)
- **Monument Guessing Game** – Students identified famous monuments from partially hidden or blurred images

Chocolates were given as rewards for correct answers, which added a competitive and enjoyable element to the learning experience.

3. Topics Covered in Activities

- Famous Indian personalities

- Indian states and geographical knowledge
- National and international monuments
- General awareness of world countries and trivia

4. Group-Wise Observations and Feedback

- **Multiple Groups** – Taught on 3rd
Feedback: High curiosity and energy levels. Students responded enthusiastically to the interactive format.
Issue: 3 student names were missing from the attendance sheet.
- **Group G5 (White Group)** – Taught on 4th
Feedback: Students actively participated in all tasks.
Issue: Some students misbehaved in response to chocolate rewards; competitiveness led to minor disruptions.
- **Group G2 (Red Group)** – Taught on 5th
Feedback: Very high energy group but extremely difficult to manage. Noise levels were excessive.
Issue: Discipline was a challenge, with volume described as louder than a jet engine.
- **Additional Note (Cross-Session)**
Observation: A student named **Rohan Baisla** repeatedly misbehaved, particularly when not receiving rewards. Volunteers noted consistent behavioural concerns across multiple sessions.

5. Challenges Faced

- Misbehaviour triggered by reward-based motivation (e.g., chocolates)
- Difficulty maintaining discipline, especially in the Red group
- Missing student names on attendance sheets

6. Suggestions or Solutions

- Consider **modifying or limiting the reward system** to reduce negative competitiveness
- Assign **additional volunteers** to high-energy groups (e.g., Red group) to assist in classroom management
- Introduce **structured, team-based response formats** instead of individual, rapid-fire answering to reduce noise and improve control

4. EXPERIMENTAL SCIENCE (Summer Camp)

1. What Was Taught in the Subject

Students were introduced to the scientific concept of **Capillary Action** – the process by which water travels through narrow spaces without external force. Key objectives included:

- Understanding how **plants absorb water** from the soil
- Exploring **real-life applications** of capillary action in nature and science

The topic generated high curiosity and enthusiasm due to its **visual and interactive presentation**.

2. Activities Done

A hands-on experiment was conducted to practically demonstrate the principle:

- **Materials Used:** Cups, water, tissues, and food colouring
- **Experiment Overview:**
Colored water was placed in individual cups connected by tissue paper.
Over time, students observed the **movement of water** through the tissues, resulting in **colour mixing** and a clear demonstration of capillary action.

The experiment visually captured the concept, making it easy for students to grasp and remain engaged.

3. Topics Covered in Activities

- Capillary Action
- Water movement through porous materials
- Real-world application in plant biology and nature
- Observational learning through real-time change

4. Group-Wise Observations and Feedback

- **Group G1 (Orange)** – Taught on 3rd
Feedback: Very enthusiastic; asked thoughtful questions and followed instructions well.
Issue: None reported.
- **Group G2 (Red)** – Taught on 4th
Feedback: Actively engaged during setup and observation; showed interest in plant biology.
Issue: None reported.

- **Group G3 (Light Green)** – Taught on 5th
Feedback: Displayed strong teamwork; students were particularly excited by the visual changes.
Issue: None reported.
- **Group G5 (White Group)** – Taught on 6th
Feedback: Focused and attentive throughout the session; enjoyed both the theory and hands-on aspect.
Issue: None reported.

5. Challenges Faced

- No challenges were reported across any of the participating groups.

6. Suggestions or Solutions

- No improvements necessary at this stage.
- The balance of concept delivery and interactive experimentation was effective and well-received across all groups.

5. Intro to AI (Summer Camp)

1. What Was Taught in the Subject

During Week 1, students were introduced to the fundamentals of Artificial Intelligence (AI) through interactive and age-appropriate sessions. Key topics covered included:

- What is Artificial Intelligence?
- Real-life applications of AI
- The Three Main Domains of AI:
 - **Machine Learning (ML)**
 - **Computer Vision (CV)**
 - **Natural Language Processing (NLP)**

For some groups, additional Week 2 topics were introduced based on the schedule:

- How AI models function
- AI chatbots vs. search engines
- Ethics in AI

These concepts were presented through real-world examples, media aids, and structured explanations.

2. Activities Done

To reinforce the concepts, a variety of engaging activities were conducted:

- **ChatGPT Live Interaction** – Students asked questions and received responses from the AI model.

- **AI-Based Games:**
 - *Rock, Paper, Scissors* (ML)
 - *Emoji Scavenger Hunt* (CV)
 - *Quick, Draw!* (CV)
 - *Chatbot Simulation* (NLP)
- **“Be the Bot” Roleplay** – Students mimicked AI chatbot responses to simulate prompt processing.
- **Quiz Rounds:**
 - 10-question and 6-question formats were used to reinforce learning.

All activities were designed to showcase how AI functions in everyday scenarios.

3. Topics Covered in Activities

- AI fundamentals and domains (ML, CV, NLP)
- Chatbot behaviour vs search engines
- Real-world applications of AI
- Basic understanding of how AI models learn and predict
- Ethical concerns related to AI use

4. Group-Wise Observations and Feedback

- **Group G1 (Orange)** – Taught on 4th
Feedback: High enthusiasm during ChatGPT interaction and games.
Issue: Duplicate student IDs noted; resolved during the session. A few students asked for chocolates after the session.

- **Group G2 (Red)** – Taught on 4th
Feedback: Very energetic session, especially with one student’s birthday celebration.
Issue: None reported. Students were cooperative and responsive.
- **Group G4 (Light Blue)** – Taught on 6th
Feedback: Excellent participation and curiosity.
Issue: Same duplicate ID issue as G1; resolved on-site. Chocolate requests are repeated.
- **Multiple Groups (Week 2 Topics)**
Feedback: Strong interest in “Be the Bot” and ethics discussions.
Issue: None. Students demonstrated a good grasp of the chatbot vs. search engine comparison.

5. Challenges Faced

- **Duplicate ID cards** caused minor attendance confusion in Groups G1 and G4.
- **Repeated requests for chocolates** were noted in multiple sessions, mildly disrupting wrap-up time.

6. Suggestions or Solutions

- Conduct a **pre-session ID verification** to avoid duplication issues.
- Set **clear reward expectations** at the beginning to prevent distraction from learning outcomes.

6. *DRAMATICS (Summer Camp)*

1. What Was Taught in the Subject

During the sessions, students were introduced to the basics of improvisational theatre (improv) as a tool for developing creativity, spontaneity, and confidence. The key focus areas were:

- What is improvisational theatre?
- Building spontaneous scenes
- Teamwork and collaboration in performance
- Using physical movement and gestures in acting

Each session began with a short briefing on improv rules and the importance of listening, reacting, and supporting partners during a performance.

2. Activities Done

To bring the concepts to life, students took part in two core activities:

- **“Mouth and Hands” Game**

Students worked in pairs—one played the “mouth” (speaking lines without using hands), while the other acted as the “hands” (gesturing without speaking). This reinforced coordination and communication.

- **Group Skit Creation**

Students were grouped and given random improv scenarios. They were asked to create and perform short skits on the spot, encouraging storytelling, teamwork, and fast thinking.

3. Topics Covered in Activities

- Principles of improvisational theatre
- Coordination and communication in group performance
- Physical expression and acting without words
- Spontaneous scene creation and role-play

4. Group-Wise Observations and Feedback

- **Group G2 (Red Group)** – Taught on 3rd
Feedback: Students were focused, energetic, and followed directions well.
Issue: None reported.
- **Group G3 (Light Green Group)** – Taught on 4th
Feedback: Participation was decent, but some students showed signs of indiscipline.
Issue: A few students disrupted the group during skit planning.
- **Group G5 (White Group)** – Taught on 6th
Feedback: Excellent energy and teamwork during activities.
Issue: None reported.

5. Challenges Faced

- Group G3 exhibited minor behavioural issues that affected the smooth facilitation of the group skit activity.

6. Suggestions or Solutions

- For G3, stronger classroom management strategies and positive reinforcement will be implemented in future sessions.
- No changes are necessary for G2 and G5, as the structure and activities worked effectively.

7. *PLAYZONE (Summer Camp)*

1. What Was Taught

Students engaged in high-energy, playful physical activities aimed at promoting spontaneity, body movement, and social interaction. The core focus was on:

- Quick thinking and reflex development
- Physical coordination and group play
- Self-expression through movement and performance
- Team bonding through shared activities

The central game introduced across all groups was “Akhbaar” (Newspaper Game), with some sessions expanding into talent and dance-based expression.

2. Activities Conducted

- **Akhbaar (Newspaper Game):** Played across all groups. Students had to respond quickly to changing instructions, emphasising coordination and awareness.
- **Talent Show – Group G4 (Light Blue):** Students performed singing, mimicry, and dance routines to showcase their talents and boost confidence.
- **Dance Rounds – Groups G2 (Red) and G5 (White):** Students danced freely to music of their choice, which promoted energy, joy, and group participation.

3. Topics Covered Through Activities

- Agility, coordination, and reflex-building (Akhbaar)
- Confidence and stage presence (Talent Show)
- Freedom of creative expression (Dance rounds)
- Team spirit, fun, and peer appreciation

4. Group-Wise Observations and Feedback

- **Group G3 (Light Green)** – Taught on 3rd
Feedback: Students were actively involved in the Akhbaar game.
Issue: Duplicate ID cards noted for two students. The issue was resolved on-site but indicated a need for better attendance checks.
- **Remaining Groups**– Taught from 4th to 6th
Feedback: Sessions ran smoothly. Students responded enthusiastically to both the game and the additional open-ended activities.
Issue: None reported.

5. Challenges Faced

- An attendance discrepancy in G3 due to duplicate IDs. Though resolved, it highlighted a potential gap in session-wise verification.

6. Suggestions or Solutions

- Group leads should perform live headcounts and match ID cards with attendance sheets before sessions begin.
- Especially in cross-functional subjects like Playzone, ensure subject marking is done after full attendance is confirmed to avoid duplication or confusion.

8. INDOOR SPORTS (Summer Camp)

1. What Was Taught

Across all sessions, students were introduced to **Table Tennis**:

- Basic rules of the game
- Grip and posture
- Turn-taking and rallying
- Exposure to indoor sports etiquette

2. Topics Covered

- **Table Tennis:** Introduction to the game and rules

- Importance of sportsmanship and discipline in indoor settings

3. Topics Covered Through Activities

- Table Tennis gameplay and mechanics
- How to take turns and play fairly
- Awareness of indoor sports safety rules

4. Issues Faced

- **Group 4 (Light Blue) – Taught on 3rd**
Students ran around the room; some lay on the air hockey table.
Suggested solution: Shift the air hockey table to a less accessible area.
- **Group 5 (White) – Taught on 4th**
Students fought over turns to play table tennis.
- **Group 1 (Orange) – Taught on 5th**
Students got bored and tired due to limited playtime and a lack of alternate games.
Issues: Many students did not get a chance to play.
- **Group 2 (Red) – Taught on 6th**
Students misused the sitting mat, and one threw it at the pool table light, causing a near accident.
Issues: Again, limited opportunities to play led to frustration.

5. Suggestions and Solutions

- **Introduce More Games:** Rotate between table tennis and other indoor sports (e.g., carrom, mini ring toss, darts, indoor bowling).

- **Structured Rotation:** Organise play in smaller sub-groups with a timer or point system to ensure fair turns.
- **Limit Distractions:** Remove or cover non-relevant equipment like the air hockey table during sessions.
- **Stronger Volunteer Monitoring:** Assign specific volunteers to crowd control and equipment management to ensure safe play.

9. PUBLIC SPEAKING (Summer Camp)

1. What Was Taught

Students were introduced to **basic public speaking skills**, specifically:

- **Speaking confidently in English**
- Managing stage fright and nervousness
- Effective delivery while speaking to an audience

Both groups responded **enthusiastically** and were **highly interactive** during the sessions.

2. Activities Conducted

- **Self-Introductions:**
Each student came up to the front and introduced themselves to the class in English.

This served as a confidence-building exercise and allowed students to practice their delivery in a safe and encouraging environment.

3. Topics Covered During Activities

While the session was activity-focused, a few **practical public speaking tips** were shared, including:

- **Speak loudly and clearly**
- Avoid **staring directly at the crowd** (instead, look above heads or at friendly faces)
- Take **deep breaths** to manage nervousness

These were explained informally and demonstrated through peer attempts.

4. Issues Faced

- **Session Duration:**

The activity (self-introductions) did not occupy the full class period, making the session feel too short or incomplete.

5. Suggested Solutions

- **Update the Supporting Material:**

A **more structured and expanded PPT** is planned for future sessions to:

- Better explain and reinforce the tips
- Add interactive follow-up activities such as:
 - Impromptu speaking challenges
 - Tongue-twister rounds
 - Mini debates or storytelling circles

10. ARTS & CRAFTS (Summer Camp)

1. Topics Covered in Activities

Across all four groups, students engaged in a creative hands-on activity:

Paper Plate Art

Materials used:

- Colored paper
- Crayons
- Markers
- Paper plates
- Scissors and glue

Volunteers demonstrated examples and explained the process. Students were then encouraged to use their own imagination to complete their artwork. Volunteers provided support as needed.

2. Engagement Level

- Students in all groups showed **high enthusiasm** and **active participation**.
- Many asked for **creative input** or assistance, showing curiosity and involvement.
- The activity was **well-received** and allowed room for self-expression.

3. Issues Faced

- **Group G1 (Orange)** – Taught on 3rd

Disruptive behaviour: A few students became upset after not receiving chocolates (prizes) for the best artwork.

- Some resorted to using **inappropriate language** toward volunteers.
- Volunteers responded by **photographing their ID cards** and warning of strict consequences.
- The situation was **de-escalated successfully**.
- **Group G2 (Red)** – Taught on 4th
- **Role conflict:** The lead had to switch to teaching another subject due to absence of many volunteers.
- **Attendance confusion:** Volunteers were unclear on the correct attendance sheet, leading to delays and uncertainty.

Groups 3 & 4 (Light Green & Light Blue)

- No major issues reported.
- Students were **well-behaved, responsive, and enthusiastic** throughout the session.

4. Suggested Solutions

- **Handling Misbehaviour:**
Your approach of de-escalation using non-physical methods (ID photo, verbal warning) was **appropriate and effective**. Going forward:
 - Ensure at least **two volunteers are present** during prize distribution to manage fairness and behaviour.
 - Consider **avoiding individual rewards** or making it a **group recognition activity** to reduce competitiveness.

- Clearly explain **reward criteria** at the start to set expectations.
- **Attendance Protocols:**
 - Ensure the attendance sheet is finalised and shared **clearly and uniformly** across all volunteers.
 - A quick daily briefing or group chat update can help avoid this kind of confusion.

11. MATHS (TLF)

1. What Was Taught

Students were introduced to **Data Models and Basic Statistics**. The focus was on helping students:

- Collect, organise, and represent real-life data.
- Understand and create visual data representations like:
 - **Bar graphs**
 - **Pie charts**
 - **Line graphs**
 - **Pictographs**
- Learn and apply **statistical concepts**:
 - **Mean**
 - **Median**
 - **Mode**

The learning approach was **hands-on**, ensuring students related math concepts to real-world applications.

2. Activities Done

Students completed practical tasks such as:

- Analysing real-life data sets.

- Constructing and interpreting graphs.
- Participating in class discussions and answering questions interactively.
- Solving statistical problems using given datasets.

This combination of visual and analytical exercises ensured deeper understanding and engagement.

3. Topics Covered in Activities

- **Data Representation:** Bar graphs, pie charts, line graphs, pictographs.
- **Statistics:** Calculating and interpreting mean, median, and mode.
- **Real-Life Application:** Connecting math to relatable scenarios such as class surveys, weather data, or favourite foods.

4. Issues Faced

Across various groups, the following challenges were noted:

- Difficulty in choosing the correct type of graph for specific data sets.
- Struggles in calculating mean, median, and mode accurately.
- Some students had trouble labelling axes, organising raw data, or interpreting visual graphs.
- A few students found it hard to distinguish between similar graph types (e.g., line vs. bar graph).
- Mild hesitation was observed in converting raw data into visual form.

5. Solutions Implemented & Suggested

What was done:

- Provided **guided practice** with step-by-step problem-solving.
- Shared **visual aids and structured worksheets**.
- Facilitated **peer discussions** and **real-life examples** to aid comprehension.
- Volunteers offered **one-on-one help** for students needing extra support.

Recommendations going forward:

- Continue using **interactive, visual teaching methods** and real-world data sets.
- Introduce **short, targeted demos** at the start of activities.
- Reinforce **concept differentiation** (e.g., when to use bar vs. pie charts).
- Provide more **scaffolded worksheets** that build up from raw data collection to graph creation.
- Consider integrating **simple technology** (like digital graphing tools) if possible.

12. ENGLISH (TLF)

1. What Was Taught

The English sessions focused on **narrative comprehension and creative writing** through the lens of storytelling. Key topics included:

- Understanding the **theme** of a story.
- Learning about the **narrative structure** and **overall story structure**.
- Exploring **how to rewrite the ending** of a story **without altering** its core theme or structure.

Students were taught to analyse what makes a story cohesive and meaningful, then apply that knowledge creatively to alter the ending of a story while preserving its essence.

2. Activities Conducted

The following sequence of activities was carried out in each session:

1. Introduction & Discussion:

- A **random story** was provided for initial analysis.
- Students worked in groups to identify the **theme, structure, and narrative pattern**.

2. Literary Analysis:

- Discussed **“The Last Leaf” by O. Henry** in detail.
- Repeated the analysis process to reinforce understanding.

3. Creative Writing:

- Students participated in a **collaborative activity** to rewrite story endings while retaining the original theme and structure.

4. Independent Assignment:

- Each student received a **take-home worksheet**.
- Task: Choose any story or movie *not discussed in class* and rewrite its ending.
- Follow-up: The First 30 minutes of the next class will be dedicated to reviewing their work.

The environment was **highly interactive**, with students actively participating, confidently sharing opinions, and showing enthusiasm for both analytical and creative tasks.

3. Topics Covered

- **Theme of a story** – identifying the central message or idea.
- **Narrative structure** – how a story is told (e.g., linear, flashback).
- **Story structure** – plot components like exposition, climax, and resolution.
- **Creative thinking** – rewriting endings while respecting story integrity.

4. Issues Faced

There were **no major challenges or behavioural issues** reported across any of the groups. Students were:

- Focused
- Cooperative

- Eager to participate

The sessions ran smoothly and according to plan.

5. Solutions/Improvements Suggested

Since there were no significant issues, no corrective measures were necessary. However, to **enhance learning further**, the following suggestions may be considered for future sessions:

- Provide **visual story maps** to help visual learners grasp structure more easily.
- Introduce **short video clips** or animations of classic stories to support engagement.
- Allow optional **peer review sessions** where students share and get feedback on their rewritten endings before submission.

13. PHYSICS (TLF)

1. What Was Taught in the Subject

Over the course of the week, students were introduced to the foundational concepts of **Electricity**, focusing on both theoretical understanding and practical applications. The objective was to make abstract concepts more accessible through visual aids, hands-on activities, and relatable examples.

The following topics were covered across all sessions:

- **Atoms and Electrons:** Introduction to atomic structure, emphasising the movement of electrons and their role in generating current.
- **Electric Current:** Defined as the flow of electrons. Students learned how this movement forms the basis of electrical circuits.
- **Potential Difference & Resistance:** Explanation of voltage as the push driving current, and resistance as the opposition to this flow.
- **Ohm's Law:** A core concept in physics, stating the relationship between voltage, current, and resistance. This was discussed with the help of real-life analogies.
- **Types of Circuits:** Students explored the differences between **Series** and **Parallel circuits**, including their advantages and limitations.
- **Circuit Symbols:** Introduction to standard circuit diagram symbols used to represent various components like resistors, bulbs, switches, and power sources.
- **Heating Effect of Current:** Discussion on how electrical energy converts into heat, with examples such as **filament bulbs**.
- **Magnetic Effects of Current:** A brief overview of how current produces magnetic fields, leading to applications such as electromagnets and electric motors.

To reinforce understanding, each session concluded with **educational videos** demonstrating:

- Heating of a **nichrome wire** under an electric current.
- The effect of increasing voltage on a bulb's brightness.

Student Engagement:

Across all three groups, student engagement was high. Most learners displayed genuine curiosity, asked relevant questions, and participated actively in discussions. The video demonstrations were particularly well-received and sparked thoughtful questions.

2. Activities Done

To bridge the gap between theory and application, each group participated in a practical session focused on **basic circuit construction**. Students were divided into smaller teams and were provided with:

- **Batteries**
- **Switches**
- **LEDs**
- **Connecting wires**

Each team successfully built a simple working circuit. They learned to troubleshoot issues such as incorrect connections or insufficient power. The activity helped students understand how current flows and how different components interact within a circuit.

This hands-on approach significantly boosted student confidence and made the learning experience interactive and memorable.

3. Topics Covered in Activities

The following learning objectives were achieved through the activity sessions:

- **Practical understanding of circuit construction**
- **Recognition and usage of circuit symbols**
- **Resistor colour coding:** Students were introduced to the standard colour code system used to identify resistor values, which also helped improve attention to detail and pattern recognition.

4. Issues Faced

- **Group G3 (Dark Green Group)** – Taught on 3rd
The session proceeded smoothly with no behavioural or logistical issues. Students showed enthusiasm during both the theory and practical segments.
- **Group G4 (Dark Blue Group)** – Taught on 4th
Although students were highly engaged, time management was a challenge. The detailed theory discussion left insufficient time for a planned quiz, which was intended to reinforce the day's learning.
- **Group G1 (Yellow Group)** – Taught on 6th
No issues were reported. The session was balanced well between theory, activity, and student participation.

5. Suggestions or Solutions

- For **G4**, it is recommended that the **theory section be streamlined** in future sessions. This would ensure adequate time is reserved for review-based quizzes or further hands-on experimentation. One possible adjustment is to introduce select topics through pre-class multimedia content, freeing up in-class time for interaction and application.

- For **G3** and **G1**, no changes are suggested as the sessions met their learning objectives effectively and were well-received by students.

14. INDOOR SPORTS (TLF)

1. What Was Taught in the Subject?

Throughout the week, students were introduced to the **fundamentals of indoor recreational sports**, with a focus on both rules and techniques. The goal was to encourage healthy competition, hand-eye coordination, and sportsmanship.

The following indoor games were introduced:

- **Table Tennis (TT):** Basics of grip, stance, and service. Introduction to the rules, including scoring and match conduct.
- **Foosball:** Students learned team coordination, control techniques, and rules for fair play.
- **Carrom** (introduced in G1, G2, and G5): Students were taught basic shooting techniques, board setup, and gameplay rules.

Each session emphasised:

- Understanding of rules and fair play.
- Development of motor skills and coordination.
- Respectful and disciplined behaviour during games.

2. Activities Done

All sessions were activity-based, allowing students to rotate between the games in small groups or pairs.

- **Group G4 (Dark Blue Group):** Played Table Tennis and Foosball.

- **Remaining Groups:** Played Table Tennis, Foosball, and Carrom.

The sessions were structured to ensure each child had ample opportunity to practice and play. Friendly matches were held within the groups to foster participation and enjoyment.

3. Topics Covered in Activities

Across all groups, the following topics were addressed during gameplay:

- **Rules and Guidelines:** Explanation of how each game is played, scoring systems, turns, and basic dos and don'ts.
- **Sportsmanship and Turn-taking:** Emphasis on patience, cooperation, and maintaining positive attitudes, especially when losing.
- **Basic Techniques:** Proper grip in TT, flicking techniques in Carrom, and handling rods in Foosball.

4. Issues Faced

- **Group G4 (Dark Blue Group):**
A limited number of students (7) led to **less competitive gameplay** and fewer match variations.
- **Group G5 (Black Group), G1 (Yellow Group), G2 (Pink Group):**
Indiscipline was noted in these sessions. This included not waiting for turns, speaking out of turn, or a lack of attentiveness during instruction.

5. Suggestions or Solutions

- For **G4**, consider **merging with another group** of similar age/skill level in future sessions to increase competitiveness, engagement, and interaction.
- For **G5, G1, and G2**, a stricter enforcement of rules and clearer communication of expectations will be implemented. Instructors will:

- Set behaviour guidelines at the start of each session.
- Use positive reinforcement for well-behaved students.
- Introduce short disciplinary pauses for disruptive behaviour if needed.

15. COMPUTER SCIENCE (TLF)

1. What Was Taught in the Subject

Throughout the week, students were introduced to **fundamental computer literacy skills and introductory web development using HTML**. The sessions aimed to build digital confidence, familiarity with devices, and encourage logical thinking through coding basics.

The sessions were structured into two key parts:

A. Basic Computer Skills

- **Using the Keyboard and Mouse:** Students learned how to navigate and control a computer using essential input tools.
- **Introduction to Computer Applications:** Students explored basic apps such as the text editor (Notepad), web browser (Chrome), and how files/folders are organized.
- **Understanding Websites:** What websites are, how they are used, and their importance in today's world.

B. Introduction to HTML and Website Building

- **HTML Basics:** Explanation of structure, purpose, and function of HTML tags.
- **Building a Web Page:** Students created their own simple HTML websites, including personal introductions, headings, formatting (bold/italic), and hyperlinks.

2. Activities Done

The sessions were hands-on, combining demonstration and individual practice. Key activities included:

- **Typing Exercise:** Students typed their own self-introductions using a text editor.
- **Website Creation:** Each student was guided through writing HTML code to create a basic web page, then expanded on it by adding formatting elements.
- **Exploration of Websites:** Students were shown real-world websites, opening them via Chrome, to understand structure and layout.

3. Topics Covered in Activities

The activities reinforced the following topics:

- What is a Computer? How do we use it today?
- What is a Website? What are the parts of a webpage?
- HTML Basics:
 - Structure of a webpage (head, body)
 - Formatting elements (, <i>, <h1>–<h6>)
 - Hyperlinking using <a> tags
- Introduction to browsers and typing fundamentals

Each group was encouraged to ask questions, engage with the interface, and assist peers where possible.

4. Issues Faced

- **Group G5 (Black Group):**
Issue: Multiple computers malfunctioning, resulting in frequent reseating of students, which interrupted the flow.
Impact: Delayed progression and reduced hands-on time.

- **Group G1 (Yellow) & Group G2 (Pink):**
Issue: Some students had to sit far from the whiteboard due to hardware limitations, making it difficult to follow instructions.
Impact: Reduced visibility led to lowered engagement for a few.
- **Group G3 (Dark Green Group):**
Issue: Only two volunteers were present, which was insufficient to manage technical help requests and individual guidance.
Impact: Students who needed extra help were left waiting, leading to frustration and disengagement for some.

5. Suggestions or Solutions

- **For All Groups Facing Technical Issues:**
Keep the **IT support staff contact number on hand** during sessions to ensure faster troubleshooting and avoid lesson disruption.
- **For G1 & G2 (Visibility Issue):**
Rearranging seating to prioritize visibility and ensuring whiteboard content is also screen-projected (if possible).
- **For G3 (Volunteer Shortage):**
Allocate **1–2 additional volunteers** to assist during Computer Science sessions to provide real-time support and ensure smoother execution of practical tasks.

16. DESIGN AND FASHION (TLF)

1. What Was Taught in the Subject

This week, students engaged in the **Eco-Future Fashion** module, which combined environmental awareness with creative fashion design. The sessions aimed to develop students' understanding of **sustainability in fashion** while allowing them to express artistic and forward-thinking concepts. The curriculum focused on:

- **Exploring Sustainable Materials:** Understanding the properties, uses, and impact of eco-friendly and upcycled fabrics.
- **Eco-Conscious Design Thinking:** Emphasis on zero-waste, slow fashion, and sustainable development goals (SDGs) in the context of fashion.
- **Mood Board Creation:** Students conceptualized and visualized their fashion ideas using mood boards to express style, tone, and sustainable themes.
- **Costume Illustration & Sketching:** Encouraged students to translate their ideas into designs through sketching and illustration, integrating form,

function, and eco-values.

Each group explored fashion not only as a medium for expression but also as a tool for climate and social advocacy.

2. Activities Done

Students participated in a variety of hands-on activities that encouraged creative exploration and practical learning:

- **Mood Board Development:** Students curated visual inspiration to reflect future-conscious fashion styles using colours, textures, and sketches.
- **Eco-Fashion Sketching:** Using paper or digital platforms, students designed costumes incorporating sustainable features like recycled fabrics and minimal-waste tailoring.
- **Demonstrations & Samples:** Videos and instructor-led demos provided real-life examples of sustainable fashion and upcycling techniques.
- **Material Exploration:** Some groups also handled samples or visual references of sustainable fabrics to inspire tactile understanding.

3. Topics Covered in Activities

The learning outcomes focused on the intersection of fashion and sustainability:

- **Eco-Fashion Mood Boards**
- **Sustainable Development Goals (SDGs) in Fashion**
- **Upcycling Techniques and Natural/Recycled Materials**
- **Zero-Waste Pattern Making and Slow Fashion Concepts**
- **Sketching and Costume Illustration for Future Fashion Trends**

- **Using Canva and Design Software (selected groups)**

These activities helped students express their values and imagination while learning practical skills in visual storytelling and fashion concept development.

4. Issues Faced

- **Group 1 (Yellow)**
 - **Issue:** Students lacked computer literacy and struggled with Canva.
 - **Impact:** Limited ability to use digital tools for visual presentation.
- **Group 3 (Dark Green)**
 - **Issue:** No major issues were reported.
- **Group 4 (Dark Blue)**
 - **Issue:** Students had difficulty selecting and arranging design elements.
 - Low digital confidence due to limited typing skills and software familiarity.
 - **Impact:** Some students could not fully express their ideas or export/save files properly.
- **Group 5 (Black)**
 - **Issue:**
 - Difficulty balancing aesthetics and functionality in designs.
 - Challenges navigating software interfaces and formatting digital mood boards.
 - Technical issues in file saving/exporting disrupted progress.
 - **Impact:** Students' creative flow was interrupted and final outputs were inconsistent.

5. Suggestions or Solutions

For Students Lacking Digital Skills (G1, G4, G5):

- **Step-by-step digital tutorials** should be introduced to explain Canva and file handling basics.
- **Increased hands-on guidance** during activities to improve familiarity with software and interface tools.
- **Simple digital design exercises** (drag-drop, image placement, text formatting) to build confidence and reduce software anxiety.

For Groups Without Issues (G3):

- Continue enhancing through **expanded demonstrations, material exploration**, and perhaps digital portfolio creation as a next step.

For All Groups:

- Where digital challenges persist, maintain **paper-based sketching and collage-making** as equally valuable, expressive alternatives to ensure no creative ideas are hindered by tech limitations.

17. SHARK TANK (TLF)

1. What Was Taught in the Subject

This week, students participated in the Shark Tank module, designed to spark entrepreneurial thinking and problem-solving. The sessions helped students recognise real-world problems and creatively design marketable solutions. Key skills developed included:

- Critical Thinking and Problem Analysis
- Creativity and Innovation in Product Design
- Teamwork and Collaboration
- Business Communication and Presentation Skills

Students were encouraged to think like entrepreneurs and develop pitches that could impact real communities, promoting confidence, persuasion, and strategic thinking.

2. Activities Done

Students engaged in a hands-on, team-based business simulation modelled after the Shark Tank format:

- Problem Identification: Each team identified a real-world issue relevant to their environment.
- Brainstorming Sessions: Teams worked together to ideate solutions, product ideas, or services.
- Business Pitch Creation: Groups created structured pitches, outlining the problem, proposed solution, its impact, and marketability.
- Shark Tank Presentations: Students presented their business ideas to peers, simulating a pitch to investors. Feedback was encouraged to improve articulation and business clarity.

This immersive activity built public speaking skills, entrepreneurial awareness, and collaborative engagement.

3. Topics Covered in Activities

The module covered a range of foundational entrepreneurship and communication topics:

- Real-Life Problem Identification
- Brainstorming Techniques and Ideation
- Team Role Assignment and Workflow Planning
- Business Pitch Structure and Key Components
- Verbal and Non-verbal Presentation Skills

- Simulated Investment and Feedback Discussion

4. Issues Faced

All groups reported high enthusiasm and engagement during the Shark Tank activity.

- **No significant issues** were encountered across any group.
- Students demonstrated strong participation, teamwork, and confidence throughout the process.

5. Suggestions or Solutions

As the activity was smoothly executed with excellent student involvement:

- **No additional suggestions** or changes are currently required.
- Continued use of entrepreneurial simulations like this is recommended, as they foster critical life skills and creativity in a real-world context.

18. THEATRE DANCE (TLF)

1. What Was Taught in the Subject

This week, students were introduced to the foundational elements of both **Hip Hop** and **Bollywood** dance forms, with a focus on rhythm, movement, and expressive performance. The sessions were tailored to be inclusive, energetic, and engaging, providing a cultural and stylistic understanding of dance as a performing art.

Key areas covered included:

- **Hip Hop Basics:** Introduction to its origin, cultural background, and simple groove-based movements.
- **Bollywood Basics:** Understanding the fusion of Indian classical, folk, and modern styles that define Bollywood choreography.
- **Choreography Training:** Learning 30-second dance routines through breakdowns and step-by-step instructions.
- **Performance and Expression:** Encouraging stage presence, confidence, and rhythm awareness through practice and feedback.

Each group learned different dance styles depending on the session focus, and all students were encouraged to explore movement as a creative form of self-expression.

2. Activities Done

Each class engaged in hands-on dance instruction involving:

- **Warm-up and Stretching Exercises:** To prepare physically and prevent injuries.
- **Dance History & Genre Talk:** Short discussions introducing Hip Hop and Bollywood origins and characteristics.
- **Step-by-Step Choreography:** Learning and practicing 30-second routines (1 or 2, depending on the group), split into manageable parts.

- **Rehearsal and Final Run-throughs:** Students practiced as a group and performed the routine with music, enhancing memory and timing.
- **Interactive Feedback:** Instructors provided real-time guidance and encouragement to boost student confidence and technique.

3. Topics Covered in Activities

The dance sessions offered students a combination of theory, practice, and cultural appreciation:

- Introduction to Hip Hop and Bollywood Dance Styles
- History, Influence, and Movement Vocabulary
- Learning Short Choreography Routines
- Musicality, Expression, and Body Coordination
- Team-based Practice and Group Synchronization
- Performance Readiness and Confidence Building

4. Issues Faced

Group G1 (Yellow)

- **Issue:** Delay in accessing the speaker equipment.
- **Impact:** Led to a late start and reduced teaching time.

Group G2 (Pink)

- **Issue:** Minor initial delay with the speaker setup.
- **Impact:** No major disruption; the session ran smoothly thereafter.

Group G5 (Black)

- **Issue:** Lack of speaker availability ahead of time.
- **Impact:** Caused a delay in beginning the session, affecting flow.

Overall Observation:

Once the sessions began, all students were highly engaged, cooperative, and showed enthusiasm for learning dance. No behavioral or instructional challenges were observed.

5. Suggestions or Solutions

To avoid future technical delays:

- **Pre-arrange Speaker Equipment:** Inform the security guard or concerned staff **a day in advance** to ensure timely availability of speakers.
- **Session Buffer Time:** Build a small buffer into the schedule for tech setup to avoid rushing the warm-up or instruction.
- **Maintain Enthusiasm:** Continue encouraging expression and confidence in performance; perhaps introduce a mini final showcase if time allows.

19. GENERAL TESTING (TLF)

1. What Was Taught in the Subject

In this session, students were introduced to solving pattern-based questions, commonly found in aptitude tests and Olympiads. The focus was on developing logical thinking and reasoning abilities through structured problem-solving exercises. The objective was to enhance cognitive flexibility and pattern recognition skills in a fun, engaging manner.

2. Activities Done

Each group was provided with a worksheet consisting of 25 pattern-based questions.

Students solved the questions during the session, and those who answered correctly received chocolates as rewards. This added a gamified element to learning and motivated enthusiastic participation across all groups.

3. Topics Covered in Activities

- Aptitude-based Pattern Recognition
- Logical Reasoning
- Critical Thinking Skills
- Time-bound Problem Solving

4. Issues Faced

No issues were reported during any of the sessions across all groups (Groups 1, 2, 3, and 5). All activities went smoothly, and the students showed active participation.

5. Suggestions or Solutions

No suggestions required. The session was well-received by the students and executed without any logistical or instructional concerns.

20. MYSTERY LABS (TLF)

1. What Was Taught in the Subject

Students were introduced to the concept of **dry ice**—its physical and chemical properties, practical uses, and associated safety protocols. The lesson included an

understanding of sublimation, temperature effects, and gas behavior. They were also briefed on the importance of **lab safety**, especially when handling reactive or hazardous materials like dry ice or fire-related elements.

2. Activities Done

Each session involved a set of engaging, hands-on science experiments using dry ice:

- **Sublimation Demonstration:** Students observed dry ice turning directly into gas when placed in water.
- **Colour Experiment:** Attempt to change gas color using colored water—highlighting that gases remain unaffected by water color.
- **Freezing Items:** A **balloon** or **flower** was frozen in dry ice, demonstrating its extreme cold and fragility upon impact.
- **Bubble Formation:** Dry ice mixed with soap and water produced cold, foggy bubbles which students could touch.
- **Pop Rocket Experiment:** A sealed bottle with dry ice and water built pressure and launched its cap—illustrating gas expansion and pressure.
- **Fire-in-Hand Demonstration:** A safe flame demonstration using special chemicals, executed by the instructor.
- **Cloud Tray Experiment:** Pouring boiling water over dry ice created a fog effect simulating clouds.

3. Topics Covered in Activities

- Dry Ice: Composition, temperature, sublimation
- Scientific Observation and Cause-Effect Relationships
- Chemical Reactions and Pressure Dynamics
- Gas Behavior and Visibility

- Safety Procedures in Handling Chemicals and Gases
- Interactive Learning through Visual and Physical Experiments

4. Issues Faced

- **Group G1 (Yellow):** Some volunteers were missing due to a delayed lunch break.
- **Group G2 (Pink):** One student's name was missing from the attendance sheet.
- **Group G3 (Dark Green):** No specific issue was noted.
- **Group G4 (Dark Blue):** No issues faced.

5. Suggestions or Solutions

- Ensure **volunteer schedules** are aligned with the session timings to avoid absence during critical demos.
- Cross-verify the **attendance sheets** beforehand to ensure all student names are included.
- Continue reinforcing **lab safety rules** at the start of every session to build awareness and avoid accidents.
