

SUMMER CAMP WEEKLY REPORT

9th- 13th June, 2025

ATTENDANCE

First day attendance:

TLF: 131

Summer Camp : 353

Second day attendance:

TLF : 117

Summer Camp : 280

Third day attendance:

TLF: 110

Summer Camp:

Fourth Day attendance:

TLF:

Summer Camp:

MORNING SESSION

June 10, 2025 - Mohit's Session (Summer Camp)

This session was conducted by Mohit and was part of the summer camp program. The focus may have been on engaging activities or learning experiences designed specifically for summer participation. Such sessions usually encourage interaction, creativity, and hands-on involvement. It likely set the tone for the rest of the week's sessions.

June 11, 2025 - Mohit's Session (TLF)

Another session led by Mohit, this time under the theme "TLF" (which could stand for The Learning Foundation or something similar). This session probably had a more structured educational approach, focusing on specific learning outcomes. TLF sessions often involve skill-building or awareness-focused content. It would have continued the momentum from the previous day's activities.

June 12, 2025 - Heat Stroke Session (By Anoushka)

This informative session focused on the topic of heat stroke, its symptoms, prevention, and treatment. It was led by Anoushka, and as noted in the image, also involved Samayra in delivering the content. Given the relevance of heat safety during summer, the session likely aimed to spread awareness and equip attendees with essential knowledge. It was an important health-related discussion relevant to the season.

June 13, 2025 - Feedback Session

The final session of this block was dedicated to gathering feedback from the participants. Such sessions are critical for understanding the impact of previous sessions and identifying areas for improvement. Participants might have shared their thoughts, suggestions, or concerns during this time. Feedback sessions ensure that future programming becomes more effective and tailored to the group's needs.

LUNCH SERVED

10/06/25 – Tuesday

Lunch included Poori and Aloo Subji with TP Juice. The meal was well-received overall, though a few found the subji slightly spicy.

11/06/25 – Wednesday

Pav Bhaji and TP Juice were served. Participants enjoyed the flavours, with some requesting extra pav for a more filling meal.

12/06/25 – Thursday

Plain Parantha and Aloo Subji were served with TP Juice. While the meal was comforting, a few suggested adding curd or pickle for variety.

13/06/25 – Friday

The South Indian combo of Sambhar, Idli, and Vada was served with TP Juice. Sambhar and Vada were appreciated, though Idlis were slightly dry for some.

SUBJECT DETAILS

1. ASTROGEO (Summer Camp)

1. What Was Taught in the Subject

During the session, students were introduced to the **geographical features of the Earth**, focusing on understanding both physical and political geography. Key facts about continents, landforms, and oceans were discussed, and the importance of these features in shaping human civilization was highlighted. To add depth and context, **stories about ancient travelers and explorers** were shared, helping students relate to the subject through narrative and historical examples. These stories were used to illustrate how geographical knowledge evolved over time and its significance in world exploration.

2. Activities Done

To reinforce learning and spark curiosity, students participated in **Atlas and**

world map exploration activities. They were encouraged to locate various countries, continents, and oceans on both digital and physical maps. The activity aimed to develop their map-reading skills and geographical awareness in an interactive way.

Originally, an activity was planned where students would **create their own maps**, but it was met with disinterest. The shift to using Atlases provided a more engaging, hands-on experience that still aligned with the learning objectives.

3. Topics Covered in Activities

The activities helped students explore and identify:

- **Countries and their corresponding states or provinces**
- **Interesting facts about various places around the world**, such as unique landmarks, cultural highlights, or environmental features
- The **relative positions of countries and continents** on a world map, improving their spatial awareness and global orientation

4. Group-Wise Observations and Feedback

Note: If you have specific group colors or names for this session, you can insert them here. In this draft, general observations are included.

- Most groups showed **greater interest when visual and interactive tools** were used (like the Atlas and real-world maps).
- Students were **less responsive to drawing-based tasks**, especially those that felt repetitive or required rote memorization.
- When content was made **story-driven or visually rich**, students demonstrated higher engagement and curiosity.
- Once the switch was made from “make your own maps” to Atlas exploration, participation and enthusiasm noticeably increased.

5. Issues Faced

- The original activity involving **students creating their own maps** was not well-received; it was seen as tedious and uninspiring by many students.
- There was a noticeable **drop in energy and engagement** when tasks were too information-heavy or lacked an element of fun.
- Some students struggled to retain factual information when presented without a narrative or interactive component.

6. Suggestions or Solutions

- Continue to **incorporate more interactive and visually engaging materials** like Atlases, globes, and multimedia presentations.
- **Blend storytelling with factual content**, as narrative-based learning proved effective in capturing student interest.

2. PRODUCT DEVELOPMENT AND SELLING (Summer Camp)

1. What Was Taught in the Subject

Throughout the week, students were introduced to foundational concepts in **product development, design thinking, and pitching strategies**. Core elements included:

- Basics of product development processes
- Real-life problem identification and analysis

- Team-based ideation and innovation
- Structuring and presenting pitches using startup-inspired formats

These topics were explored through worksheets, guided group discussions, and structured exercises that encouraged critical thinking and creativity.

2. Activities Done

Students actively participated in practical, collaborative tasks to reinforce the learning:

- **Problem-Solving Workshops:** Teams worked to identify challenges and ideate solutions
- **Shark Tank Challenge:** Simulated startup environment where students pitched product ideas to peers, encouraging confidence and entrepreneurial thinking

3. Topics Covered in Activities

The group activities allowed students to practice:

- Real-world problem identification
- Innovation and brainstorming
- Team-based product concept development
- Effective pitching and presentation skills

4. Group-Wise Observations and Feedback

- **Multiple Groups** – Taught on 3rd
Focus: Introduction to product development basics and real-life problem scenarios.
Feedback: Students were enthusiastic and showed quick understanding of the concepts.
Issues: None reported.

- **Multiple Groups** – Taught on 4th
Focus: Application of design thinking in the **Shark Tank Challenge**.
Feedback: Presentations were confident, and teamwork was excellent.
Issues: None reported.
- **Group G5 (White Group)** – Taught on 5th
Focus: Continued development using worksheets and group-based problem-solving.
Feedback: Students contributed thoughtfully and collaborated well.
Issues: None reported.

5. Issues Faced

No significant issues were observed across any of the sessions. Participation levels were consistently high, and all sessions were conducted smoothly with effective time use.

6. Suggestions or Solutions

None at this time. The current structure — a blend of concept introduction, hands-on teamwork, and pitch-based challenges — is proving effective and well-received by students.

3. **CRITICAL REASONING (Summer Camp)**

1. What Was Taught in the Subject

Students were introduced to foundational math skills, specifically:

- Mental math strategies
- Understanding and applying percentages in real-life contexts

These skills were taught to support puzzle-solving and daily logical reasoning. Extra attention was given to students with weak mathematical backgrounds, offering individual help when possible.

2. Activities Done

Two main activities were conducted to reinforce learning:

- **Menu Percentage Task:** Students calculated calorie percentages from a food menu, helping them apply percentages practically.
- **Math Bingo:** A game based on basic math operations like multiplication and division to improve fluency.

3. Topics Covered in Activities

- Basic multiplication and division
- Real-life application of percentages
- Strengthening fundamental arithmetic through games

4. Group-Wise Observations and Feedback

- Some students demonstrated strong math skills and completed tasks quickly.
- Others struggled significantly, especially with basic operations like long division (e.g., $64 \div 3$).
- One student mentioned their school no longer teaches math, suggesting a need for external academic support.

5. Issues Faced

- Wide learning gap among students: some excelled while others lacked basic arithmetic understanding.
- Difficulty in addressing all learning levels during a single session.

6. Suggestions or Solutions

- Consider arranging a **separate community learning program** (outside of the summer camp) focused solely on academic support, especially for core subjects like math.
- Such sessions could function like **tuition classes** with smaller groups and more focused attention.
- Continue blending real-life applications with games to keep struggling students motivated.

4. EXPERIMENTAL SCIENCE (Summer Camp)

1. What Was Taught in the Subject

Students were introduced to the scientific concept of **Capillary Action** – the process by which water travels through narrow spaces without external force. Key objectives included:

- Understanding how **plants absorb water** from the soil
- Exploring **real-life applications** of capillary action in nature and science

The topic generated high curiosity and enthusiasm due to its **visual and interactive presentation**.

2. Activities Done

A hands-on experiment was conducted to practically demonstrate the principle:

- **Materials Used:** Cups, water, tissues, and food colouring
- **Experiment Overview:**
Colored water was placed in individual cups connected by tissue paper.
Over time, students observed the **movement of water** through the tissues, resulting in **colour mixing** and a clear demonstration of capillary action.

The experiment visually captured the concept, making it easy for students to grasp and remain engaged.

3. Topics Covered in Activities

- Capillary Action
- Water movement through porous materials
- Real-world application in plant biology and nature
- Observational learning through real-time change

4. Group-Wise Observations and Feedback

- **Group G1 (Orange)** – Taught on 3rd
Feedback: Very enthusiastic; asked thoughtful questions and followed instructions well.
Issue: None reported.
- **Group G2 (Red)** – Taught on 4th
Feedback: Actively engaged during setup and observation; showed interest

in plant biology.

Issue: None reported.

- **Group G3 (Light Green)** – Taught on 5th

Feedback: Displayed strong teamwork; students were particularly excited by the visual changes.

Issue: None reported.

- **Group G5 (White Group)** – Taught on 6th

Feedback: Focused and attentive throughout the session; enjoyed both the theory and hands-on aspect.

Issue: None reported.

5. Challenges Faced

- No challenges were reported across any of the participating groups.

6. Suggestions or Solutions

- No improvements necessary at this stage.
- The balance of concept delivery and interactive experimentation was effective and well-received across all groups.

5. Intro to AI (Summer Camp)

1. What Was Taught in the Subject

The Week 2 session introduced students to foundational concepts of Artificial Intelligence, including:

- How AI models function
- Differences between AI models like ChatGPT and traditional search engines like Google
- Chatbots and Natural Language Processing (NLP)
- Ethical considerations in the development and use of AI

2. Activities Done

Students participated in several engaging activities to deepen their understanding:

- **Interaction with ChatGPT:** Real-time questions and comparisons with Google to understand differences in functionality
- **Chatbot Roleplay:** An activity titled “*Be the Bot*” where students acted like AI chatbots and responded to prompts with context sensitivity
- **Prompt Evaluation:** Reviewed and refined ideal vs unideal prompts
- **6-Question Quiz:** Tested understanding of key AI concepts

3. Topics Covered in Activities

- Functioning and purpose of chatbots

- Introduction to deep learning
- How AI models interpret and respond to input
- Ethical concerns related to AI systems
- Comparison of AI model outputs vs search engine results

4. Group-Wise Observations and Feedback

- Students showed strong curiosity and participation throughout all activities.
- The “*Be the Bot*” game was particularly effective in encouraging creative thinking and deeper understanding of chatbot behavior.

5. Issues Faced

- None reported.

6. Suggestions or Solutions

- None required at this stage. Sessions ran smoothly and were well-received.

6. *DRAMATICS (Summer Camp)*

1. What Was Taught in the Subject

Students were introduced to the basics of skit performance and theatre acting. Key elements covered included:

- Fundamentals of stage presence and dialogue delivery
- How to collaborate and perform in small groups
- Structure and flow of a short skit (6–7 minutes duration)

Each group (7–8 students) was allowed to choose their own topic, encouraging creativity and ownership of the performance.

2. Activities Done

- **Group Skits:** Students formed groups and performed short skits based on topics of their choice.
- Practice sessions helped them understand pacing, coordination, and theatrical expression.

3. Topics Covered in Activities

- Rules and guidelines for group skit performances
- Elements of drama including teamwork, voice modulation, and basic stage direction

4. Group-Wise Observations and Feedback

- Students were highly enthusiastic and actively participated.
- Both performers and audience members found the sessions engaging and enjoyable.

5. Issues Faced

- None reported.

6. Suggestions or Solutions

- None needed at this time. The format and activities were effective and well-received.

7. *PLAYZONE (Summer Camp)*

1. What Was Taught in the Subject

The focus this week was on encouraging physical activity, quick reflexes, and spontaneous creativity through play.

- The primary game played was **Fire in the Mountain**, which promoted alertness and coordination.

2. Activities Done

- **Fire in the Mountain:** An interactive game played with the entire group.
- **Talent Showcase Tasks:** Losers of the game were asked to complete fun tasks such as dancing or singing, often chosen by the winners.

3. Topics Covered in Activities

- Group dynamics and playful competition
- Creativity and confidence through on-stage tasks
- Fun-based reward and challenge structure using chocolates and performance tasks

4. Group-Wise Observations and Feedback

- All students participated enthusiastically.
- The reward and challenge format kept energy levels high and fostered group bonding.

5. Issues Faced

- None reported.

6. Suggestions or Solutions

- None needed. The structure was simple, effective, and enjoyed by all participants.

8. INDOOR SPORTS (Summer Camp)

1. What Was Taught in the Subject

This week, regular indoor sports sessions were replaced with an awareness-based lecture on **air pollution**. The aim was to educate students on environmental issues and promote responsible citizenship. Topics covered included:

- Causes and effects of air pollution
- Real-life impact on human health and the environment
- Personal experiences and local challenges related to pollution
- Brainstorming potential solutions through guided surveys

Where time allowed, students were shown short educational videos reinforcing the topics discussed.

2. Activities Done

- Group discussions on air pollution and its effects
- Surveys where students proposed possible solutions
- Short video screenings (time permitting) to visually explain key concepts

3. Topics Covered in Activities

- Air pollution: causes, effects, and solutions
- Environmental awareness and personal accountability
- Discussion-based learning and peer sharing

4. Group-Wise Observations and Feedback

- Students engaged well in the discussions, especially when sharing personal experiences.
- They showed curiosity and a willingness to learn more about environmental issues.

5. Issues Faced

- **Lack of physical activity led to restlessness:** As this week deviated from the usual active indoor games format, some students became visibly restless and less focused.
- **Reduced enthusiasm:** A few students expressed disappointment due to the absence of physical games they had come to expect.
- **Engagement dropped after the initial discussion:** While the early part of the session involving personal sharing held interest, attention waned during the video segments or longer explanations.
- **Managing energy levels was a challenge:** Without movement-based activities, keeping students energized and attentive throughout was noticeably harder.

6. Suggestions or Solutions

- Consider blending educational content with interactive or movement-based tasks (e.g., pollution-themed role play or group challenges) to maintain energy.
- Keep theoretical content brief and break it up with active participation elements.
- Reinstitute a balance of physical games alongside awareness activities in future sessions.

9. PUBLIC SPEAKING (Summer Camp)

1. What Was Taught in the Subject

The focus for Week 2 was on introducing students to **debating** as a structured and meaningful form of communication. Key points covered included:

- **What is a Debate?:** Understanding debate as a structured discussion where opposing viewpoints are presented.
- **Importance of Debate in Society:** Highlighted how debating develops critical thinking, articulation, and respect for diverse perspectives.
- **How to Improve at Debating:** Students learned practical tips such as organizing thoughts clearly, listening attentively, and speaking with confidence.

2. Activities Done

- **Group Debates:** Students were divided into teams (5 per side) and given simple, relatable topics related to school life.
- Each group had time to brainstorm, write down their points, and then present them in a structured group debate format.

3. Topics Covered in Activities

- Basics and structure of debate
- Practical use of debating skills
- Application of communication techniques during a live debate

4. Group-Wise Observations and Feedback

- Students were engaged and actively participated.

- The format encouraged teamwork, idea generation, and confident public speaking.
- Many students showed visible improvement in expressing their thoughts clearly.

10. ARTS & CRAFTS (Summer Camp)

1. Topics Covered in Activities

Across all four groups, students engaged in a creative hands-on activity:

Paper Plate Art

Materials used:

- Colored paper
- Crayons
- Markers
- Paper plates
- Scissors and glue

Volunteers demonstrated examples and explained the process. Students were then encouraged to use their own imagination to complete their artwork. Volunteers provided support as needed.

2. Engagement Level

- Students in all groups showed **high enthusiasm** and **active participation**.
- Many asked for **creative input** or assistance, showing curiosity and involvement.
- The activity was **well-received** and allowed room for self-expression.

3. Issues Faced

- **Group G1 (Orange)** – Taught on 3rd

Disruptive behaviour: A few students became upset after not receiving chocolates (prizes) for the best artwork.

- Some resorted to using **inappropriate language** toward volunteers.
- Volunteers responded by **photographing their ID cards** and warning of strict consequences.
- The situation was **de-escalated successfully**.
- **Group G2 (Red)** – Taught on 4th
- **Role conflict:** The lead had to switch to teaching another subject due to absence of many volunteers.
- **Attendance confusion:** Volunteers were unclear on the correct attendance sheet, leading to delays and uncertainty.

Groups 3 & 4 (Light Green & Light Blue)

- No major issues reported.
- Students were **well-behaved, responsive, and enthusiastic** throughout the session.

4. Suggested Solutions

- **Handling Misbehaviour:**
Your approach of de-escalation using non-physical methods (ID photo, verbal warning) was **appropriate and effective**. Going forward:
 - Ensure at least **two volunteers are present** during prize distribution to manage fairness and behaviour.
 - Consider **avoiding individual rewards** or making it a **group recognition activity** to reduce competitiveness.

- Clearly explain **reward criteria** at the start to set expectations.
- **Attendance Protocols:**
 - Ensure the attendance sheet is finalised and shared **clearly and uniformly** across all volunteers.
 - A quick daily briefing or group chat update can help avoid this kind of confusion.

11. MATHS (TLF)

1. What Was Taught in the Subject

This week focused on helping students build a strong understanding of foundational mathematical concepts through interactive, quiz-based learning. The goal was to make the sessions both educational and enjoyable, while checking the students' grasp of core topics in algebra and geometry.

Topics Covered:

- Algebraic equations and their structure
- Solving for unknowns using inverse operations and balancing techniques
- Understanding and manipulating linear equations in the form $Ax + By = C$
- Calculating area and perimeter of 2D shapes like triangles, squares, and rectangles
- Exploring properties of shapes such as angles, sides, and symmetry
- Finding surface area of 3D figures such as cubes and cuboids using standard formulas

2. Activities Done

The main activity this week was a structured mathematics quiz conducted in class.

- The quiz was written and included both concept-based and real-life application questions
- Questions required use of formulas, figure interpretation, and logical reasoning
- Students were given limited time for each section to simulate a test-like environment

- At the end of the quiz, chocolates were awarded to top scorers and students who showed effort
- This reward system helped create a fun, competitive atmosphere and kept students motivated

3. Topics Covered in Activities

- Application of algebra in solving structured problems
- Use of formulas to calculate area and surface area
- Classification and calculation involving 2D and 3D shapes
- Applying math to solve practical and real-world scenarios
- Encouraging active engagement in mathematics through games and quizzes

4. Group-Wise Observations and Feedback

- Students participated actively and showed high engagement throughout the session
- Many students performed well in identifying shapes and recalling formulas
- The quiz format helped students focus and made math feel less stressful
- Peer discussions after the quiz were constructive and encouraged collaborative learning

5. Issues Faced

- Some students confused formulas for area, perimeter, and surface area

- A few skipped steps or presented unclear workings while solving equations
- Several students needed extra support in interpreting word-based questions
- Time management was an issue for some students who were unable to finish the quiz

6. Suggestions or Solutions

- Use visual aids and mini drills in class to help with formula retention
- Teach students how to break down word problems step-by-step
- Reinforce the importance of writing clear, structured solutions
- Conduct short, timed practice quizzes weekly to improve pacing and confidence

7. Student Responses

- Students found the quiz to be more engaging than a regular test
- They appreciated the variety in question types and the chance to test themselves
- Many said the activity helped them better understand what they knew well and where they needed more practice
- The time-bound nature added excitement and improved focus
- Reward-based encouragement created a positive and enthusiastic learning environment

12. ENGLISH (TLF)

1. What Was Taught in the Subject

This week's focus was on **dialogue writing**, aimed at improving students' writing and communication abilities. Key elements covered included:

- Understanding what a dialogue is and how it differs from regular narrative writing
- Learning the basic structure of a conversation between two people
- Correct usage of punctuation and tone in dialogues
- Writing dialogues that sound natural, realistic, and engaging

2. Activities Done

- Shared simple, relatable examples such as a conversation between friends or between a customer and a shopkeeper
- Demonstrated a dialogue on the board and acted it out to model expression and tone
- Students paired up and wrote short dialogues based on given scenarios
- A presentation activity where students performed their written dialogues in front of the class

3. Topics Covered in Activities

- Dialogue structure and formatting
- Real-life communication scenarios
- Punctuation and tone in written and spoken dialogue

- Building confidence in public speaking through performances

4. Group-Wise Observations and Feedback

- Students participated enthusiastically in all tasks
- Many students volunteered to perform their dialogues, showing initiative and confidence
- Pair work encouraged collaboration and peer learning
- Creativity and humor were visible in many performances, making the session dynamic and enjoyable
- Several initially shy students became more confident by the end of the session and willingly presented in front of the class

13. PHYSICS (TLF)

1. What Was Taught in the Subject

This week focused on introducing students to the fundamental concepts of **motion in one dimension**, with brief exposure to two-dimensional motion. Key topics covered included:

- Difference between distance and displacement
- Basics of vector quantities
- Definitions and formulae for speed, velocity, and acceleration
- The three equations of motion and their derivations

- Momentum and Newton's Laws of Motion
- Concept of free fall
- Introduction to 2D motion

Students responded positively to the concepts and showed enthusiasm in understanding derivations and real-world applications. They were particularly excited during activity sessions.

2. Activities Done

Two main activities were conducted to reinforce the week's learning:

- **Free Fall Experiment:** Students measured the time taken for a ball to fall 110 cm and used this to calculate acceleration due to gravity using the second equation of motion.
- **Paper Plane Activity:** Students created paper planes and observed their flight to understand the basics of 2D motion and projectile paths.

3. Topics Covered in Activities

- Practical understanding of free fall and motion under gravity
- Introduction to experimental error and reading accuracy
- Basics of projectile motion in two dimensions

4. Group-Wise Observations and Feedback

- Students showed a strong interest in both theoretical and practical aspects
- Activities helped reinforce formulas and improved conceptual clarity
- Discussions during the activities encouraged collaborative learning and critical thinking

14. INDOOR SPORTS (TLF)

1. What Was Taught in the Activity

This week's indoor sports sessions were designed to **reinforce foundational skills** while introducing **new elements of gameplay, coordination, and competitive spirit**. The focus remained on structured physical activity, rule adherence, and fostering teamwork.

Students engaged in the following key activities:

- **Foosball (Foosball):** Introduction to game fundamentals such as proper grip, control of rods, team coordination, and understanding fair play. Emphasis was placed on communication and strategic movement.
- **Yoga:** Sessions guided students through a series of **basic yoga asanas**, with a focus on **improving flexibility, enhancing concentration, and building body awareness**. Mindfulness and calmness were encouraged.
- **Table Tennis:** Students participated in **knock-out style matches**, applying techniques learned in the previous week. This introduced a **competitive but friendly environment**, promoting focus, reflexes, and sportsmanship.
- **Carrom:** Continued practice sessions helped students **refine their flicking technique** and develop an understanding of **match strategy, scoring, and tactical gameplay**.

Across all sports, sessions reinforced:

- **Knowledge of game rules**
- **Structured participation**
- **Teamwork and respectful engagement**
- **Physical and mental well-being, especially through yoga**

2. Activities Done Per Subject

All sessions were **hands-on and activity-focused**, rotating students through various indoor sport stations to maintain energy and engagement:

- **All Groups:** Participated in **Foosball, Yoga, Table Tennis, and Carrom**
- **Table Tennis:** Organized into **knock-out tournaments within each group**, sparking enthusiasm and team spirit
- **Yoga:** Provided a **calming and centering experience**, balancing out the more dynamic activities and promoting well-being

3. Topics Covered in Activities

The following content areas were addressed through guided instruction and gameplay:

- **Foosball:** Rules of play, hand-eye coordination, rod control, team-based tactics
- **Yoga:** Introduction to basic postures (asanas), breathing awareness, physical and mental relaxation
- **Table Tennis & Carrom:** Reinforcement of techniques (e.g., grip, shot control, turn-taking), scoring systems, and focus on fair competition

4. Group-Wise Observations and Feedback

- **Group G1 (Yellow) & Group G5 (Black):**
 - **Observed Issues:** These groups showed signs of **indiscipline**, including not waiting for their turn, talking during instruction, and general inattentiveness. This impacted the flow of sessions and required redirection from instructors.

- **Suggested Intervention:** Stricter behavioral expectations to be introduced and maintained consistently.
- **Other Groups:**
 - Displayed moderate to high levels of engagement, especially during **competitive games and yoga sessions**. However, some signs of fatigue and **boredom due to perceived repetition** of activities were noticed.

5. Issues Faced

- **Lack of Enthusiasm:** A few students across groups expressed **disinterest** in repeated sessions of the same sports, leading to a drop in excitement.
- **Discipline Challenges:** As noted in G1 and G5, **behavioral issues** such as talking out of turn or skipping rules impacted the quality of sessions.

6. Suggestions or Solutions

To address the issues and improve the learning environment:

- **Behavior Management Plan:**
 - Clearly explain **rules and behavior expectations** at the start of each session.
 - Use **positive reinforcement**, such as praise or small rewards, to encourage attentive and respectful behavior.
- **Refresh Activity Design:**
 - Introduce **weekly skill challenges**, mini-tournaments, or rotating game formats to **break monotony** and sustain interest.
 - Consider including **new indoor games** or variations (e.g., doubles in table tennis, timed carrom rounds, themed yoga sessions) to keep the experience dynamic.

15. COMPUTER SCIENCE (TLF)

1. What Was Taught in the Subject

This week introduced students to the **Python programming language** and its basic applications. The focus was on developing foundational coding skills through practical examples.

Topics Covered:

- What Python is and why it is widely used in fields like web development, data science, and automation
- Basic Python concepts such as the `print()` function, variables, and common data types including integers, strings, and booleans
- How to take user input and convert it into different data types using built-in functions
- An introduction to **conditional logic** using `if`, `else`, and `elif` statements
- A basic explanation of **functions** and how they are used to organize and reuse code

2. Activities Done

Students practiced key programming concepts through hands-on tasks:

- Wrote simple Python code to create a triangle pattern using the `print()` function
- Used `input()` and `if-else` statements to write a program that checks if a person is eligible to drive
- Built a basic calculator using variables and integer inputs from users

3. Topics Covered in Activities

- Introduction to Python syntax and structure
- Use of basic Python functions like `print()` and `input()`
- Understanding and applying conditional logic
- Writing simple programs that take user input and respond with appropriate outputs

4. Group-Wise Observations and Feedback

- Students showed strong interest and enjoyed the hands-on nature of coding activities
- Many were excited to see their code produce real-time outputs
- The concept of using logic to build programs was well received and understood

16. DESIGN AND FASHION (TLF)

1. What Was Taught in the Subject

The focus of Week 2 was on introducing students to the concepts and practices of **upcycling in sustainable fashion**. The aim was to help students see how discarded items, like old T-shirts, could be creatively transformed into fashionable and functional accessories. The session emphasized creativity, craftsmanship, and environmental responsibility.

Students were encouraged to think beyond conventional design and consider sustainability as a core value in fashion and product development.

2. Activities Done

Students participated in a hands-on **design sprint** where they could freely imagine and create accessories of their choice using old T-shirts. Tote bags were given as a reference idea, but complete creative freedom was allowed.

Activities included:

- **Material Sourcing:** Students brought old T-shirts from home
- **Concept Sketching:** Optional pre-planning of their accessory design

- **Cutting, Stitching, and Assembly:** Using hand tools and glue guns to bring designs to life
- **Decoration and Personalization:** Use of leftover fabric, embellishments, and patches to make designs unique
- **Peer Discussions and Feedback:** Sharing ideas and receiving input from peers and instructors

3. Topics Covered in Activities

- Introduction to **upcycling** and **eco-fashion**
- Creative planning and **conceptualization** of accessory design
- Basic **cutting, stitching, and crafting techniques**
- Safe use of tools including scissors, needles, and glue guns
- **Textile waste awareness** and the importance of sustainable consumption
- **Personal styling and innovation** through self-led design choices

4. Group-Wise Observations and Feedback

- Students were highly engaged and enthusiastic about the creative freedom
- Many students showed impressive originality in their accessory concepts
- Peer learning naturally emerged as confident students helped others
- Some students struggled initially but became more confident with hands-on practice

5. Issues Faced

- Several students had limited experience with cutting and stitching, resulting in uneven measurements
- Some found it difficult to decide on a final design or were hesitant to execute unique ideas
- Despite demonstration videos, a few students needed more step-by-step guidance
- Complex ideas took longer than expected and couldn't be completed within one session

6. Suggestions or Solutions

- Introduce short **skill warm-up exercises** using scrap fabric before the main activity
- Provide a **mood board or gallery** with simple reference designs to spark creativity
- Offer a **live demonstration with tool safety instructions** before beginning the hands-on work
- **Split complex projects** across two sessions—one for ideation and the second for execution
- Encourage **peer mentoring or group work** to build confidence and teamwork

7. Student Responses

Students responded very positively to the session. They enjoyed having creative freedom and were excited by the idea of giving old materials a new purpose. The opportunity to choose their own designs made them feel more involved and enthusiastic. Many students brought innovative and fresh ideas to the table, showing natural talent in upcycling. It was inspiring to see how capable and creative they were.

One of the best student response sheets has been shared separately for review.

17. SHARK TANK (TLF)

1. What Was Taught in the Subject

This week, students participated in the Shark Tank module, designed to spark entrepreneurial thinking and problem-solving. The sessions helped students recognise real-world problems and creatively design marketable solutions. Key skills developed included:

- Critical Thinking and Problem Analysis
- Creativity and Innovation in Product Design
- Teamwork and Collaboration
- Business Communication and Presentation Skills

Students were encouraged to think like entrepreneurs and develop pitches that could impact real communities, promoting confidence, persuasion, and strategic thinking.

2. Activities Done

Students engaged in a hands-on, team-based business simulation modelled after the Shark Tank format:

- Problem Identification: Each team identified a real-world issue relevant to their environment.
- Brainstorming Sessions: Teams worked together to ideate solutions, product ideas, or services.
- Business Pitch Creation: Groups created structured pitches, outlining the problem, proposed solution, its impact, and marketability.
- Shark Tank Presentations: Students presented their business ideas to peers, simulating a pitch to investors. Feedback was encouraged to improve

articulation and business clarity.

This immersive activity built public speaking skills, entrepreneurial awareness, and collaborative engagement.

3. Topics Covered in Activities

The module covered a range of foundational entrepreneurship and communication topics:

- Real-Life Problem Identification
- Brainstorming Techniques and Ideation
- Team Role Assignment and Workflow Planning
- Business Pitch Structure and Key Components
- Verbal and Non-verbal Presentation Skills
- Simulated Investment and Feedback Discussion

4. Issues Faced

All groups reported high enthusiasm and engagement during the Shark Tank activity.

- **No significant issues** were encountered across any group.
- Students demonstrated strong participation, teamwork, and confidence throughout the process.

5. Suggestions or Solutions

As the activity was smoothly executed with excellent student involvement:

- **No additional suggestions** or changes are currently required.

- Continued use of entrepreneurial simulations like this is recommended, as they foster critical life skills and creativity in a real-world context.

18. THEATRE DANCE (TLF)

1. What Was Taught in the Subject

This week focused on **theatre as a creative outlet** to help students develop confidence, expression, and teamwork. The session introduced students to the core elements of stage performance in an interactive and accessible way.

Topics Covered:

- Basics of theatre including body language, facial expressions, and voice modulation
- Performing short skits and scenes in small groups
- Understanding how to express emotions and actions clearly on stage

- Using familiar settings like school scenes, family dinners, and bus stops to make activities relatable and fun

2. Activities Done

- Students were divided into groups and assigned short, simple skits based on everyday life scenarios
- Theatre warm-up games were conducted at the beginning to help students loosen up and feel comfortable
- Each group practiced and performed their scenes with creative input on dialogues and expressions
- Peer performances were encouraged with supportive feedback and group cheering

3. Topics Covered in Activities

- Stage presence and confidence-building through acting
- Use of facial expression, movement, and voice control in storytelling
- Group collaboration and role-sharing
- Introduction to basic scene-setting and improvisation

4. Group-Wise Observations and Feedback

- Students were energetic, enthusiastic, and quick to engage with the activity
- Many students took initiative to create their own dialogues and scenes
- Shy students opened up on stage and gave confident, expressive performances

- Students supported and encouraged each other throughout, creating a positive and collaborative environment

19. GENERAL TESTING (TLF)

1. What Was Taught in the Subject

In this session, students were introduced to solving pattern-based questions, commonly found in aptitude tests and Olympiads. The focus was on developing logical thinking and reasoning abilities through structured problem-solving exercises. The objective was to enhance cognitive flexibility and pattern recognition skills in a fun, engaging manner.

2. Activities Done

Each group was provided with a worksheet consisting of 25 pattern-based questions.

Students solved the questions during the session, and those who answered correctly received chocolates as rewards. This added a gamified element to learning and motivated enthusiastic participation across all groups.

3. Topics Covered in Activities

- Aptitude-based Pattern Recognition
- Logical Reasoning
- Critical Thinking Skills
- Time-bound Problem Solving

4. Issues Faced

No issues were reported during any of the sessions across all groups (Groups 1, 2, 3, and 5). All activities went smoothly, and the students showed active participation.

5. Suggestions or Solutions

No suggestions required. The session was well-received by the students and executed without any logistical or instructional concerns.

20. MYSTERY LABS (TLF)

1. What Was Taught in the Subject

This week introduced students to key **chemical concepts** through hands-on experiments and demonstrations. The primary focus was on acids, bases, and simple chemical reactions to help students observe and understand scientific principles in action.

Topics Covered:

- Introduction to **acids and bases**
- Properties of acids and bases
- Understanding and using the **pH scale**
- Identifying acidic and basic substances using **litmus paper** and **pH paper**

- Introduction to **thermal decomposition** and its visual demonstration
- Basic application of **iodine test** for food adulteration detection

2. Activities Done

- Demonstration of acids and bases using red and blue litmus paper
- Students used pH paper to test given solutions and identify whether they were acidic, basic, or neutral
- A **volcano experiment** using dry ice and a chemical mixture created an erupting bubble effect, engaging students with an exciting visual reaction
- A **thermal decomposition** activity using sodium bicarbonate was done, where heating a drawing on paper made with sodium bicarbonate caused the image to appear
- An **iodine test** was conducted on two samples of paneer to detect the presence of starch and identify adulteration

3. Topics Covered in Activities

- Recognition of acids and bases through indicators
- Use and interpretation of the pH scale
- Understanding thermal decomposition and visual chemical change
- Application of iodine test in identifying starch and food adulteration
- Observation, analysis, and recording of chemical reactions

4. Group-Wise Observations and Feedback

- Students were highly interactive and curious throughout the session

- They showed enthusiasm during hands-on parts, especially the volcano and hidden-drawing experiments
- Most students were able to correctly interpret pH results and apply the iodine test confidently
- The visual nature of the experiments helped keep attention levels high and made scientific concepts easier to grasp
